### PROBLEMS STATEMENT 1

#### Pharmacy Management System: Solution Overview

- The system provides a web-based interface for small medical shops to digitally enter and manage data about their medicines.
- It automatically tracks real-time stock levels and sends an alert notification to the shop owner when a medicine's stock is running low.
- The application also helps prevent the sale of expired drugs by providing proactive alerts for medicines nearing their expiration date.
- It acts as a centralized database, allowing for easy access to and analysis of sales data, improving business decision-making.

### PROBLEM STATEMENT 2

#### Smart Patient <sup>Data</sup> Sharing System: Solution Overview

- Centralized Patient Health Records: The app acts as a single, secure repository for all a patient's medical data, including reports, bills, and prescriptions, accessible from anywhere.
- Inter-Hospital Data Connectivity: Hospitals are connected on the platform, allowing patients to seamlessly access their complete medical history from any hospital in the network.
- Integrated Pharmacy Management: The system is linked to pharmacy management systems, allowing patients to securely share their digital prescriptions with pharmacists directly from the app.
- Secure and Long-Term Access: Patient data is protected by a password (username and number) and is accessible for an indefinite period, eliminating the need for physical storage and providing access to historical records.

### PROBLEM STATEMENT 3

#### Student-Centric Ride-Sharing App: Solution Overview

- The solution addresses the unique transportation challenges faced by students in India, focusing on safety, affordability, and convenience.
- Peer-to-Peer Carpooling: The app facilitates carpooling among verified students traveling in the same direction, making rides significantly more affordable than traditional cab services.
- Enhanced Safety and Trust: The platform ensures a secure environment by requiring mandatory university ID verification for all users and including an SOS button and real-time tracking for peace of mind.
- Targeted and Convenient Matching: The app's algorithm matches students based on their university and travel routes, ensuring that they can easily find a ride to and from campus at any time.
- Flexible Booking Options: Users can either book a ride instantly or schedule a ride in advance for a regular commute, providing flexibility and reliability for their daily travel needs.

After a detailed discussion, I have collected the following points.
